Superfund Program Update

North and South Cavalcade  
Houston, Texas

July 1987

The purpose of this fact sheet is to provide a status report on the activities at the North and South Cavalcade Superfund sites. This update is the third in a series of fact sheets issued by the U.S. Environmental Protection Agency.

North Cavalcade

During the last week of July, warning signs will be placed along the utility easement which runs east to west about 150' north of Cavalcade Street on the North Cavalcade site. These signs will warn utility workers not to dig in the area because of the hazardous materials located below the surface. We believe the signs are needed to ensure the safety of all concerned.

South Cavalcade

In an effort to better characterize the contamination problem, three additional monitoring wells will be installed: two in the residential area one block west of the site and one on the Crozier-Nelson property east of the site. These wells will be installed in late July-early August. Installation should be completed within two weeks. The contractor, Keystone Environmental Services, will contact individual property owners directly to obtain access and permission to drill. Every effort will be made to reduce any inconveniences.

Additional Information

If you would like additional information about the North and South Cavalcade sites, please call or write:
